                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  NIH MGC http://mgc.nci.nlh.gov/  First strand cond was primed with a primer for GoldschafedAnfedAnfedTripting 14, cond was prepared by using trebulose thermo-activated reverse transcriptase and subsequently enriched for full-length by cap-trapper. Second strand (GM was prepared with the primer adapter of sequence [5] dadacadachicicosofila and share coordinated and sequence [5] with Nhol and Ssti. Cloning sites, 5, cond: Nhol; 3, cond: Ssti.

/note=="Vector: pr773D-Pac (Pharmacia) with a modilied
polylinker; lst strand cDNA was prepared from mammary
gland tissue from a lactating female, and was then pr1med
with a Not I - ollog(d7) primer. Double-stranded cDNA was
ligated to Eco RI adaptors (Pharmacia), digested with Not.
I and cloned into the Not I and Eco RI sites of the
modified pr773 vector. Library is normalized. Library
was constructed by Bento Soales and M. Fathma Houaldo."
